To whom it may concern:

Daniel Warner was a student in my online **GIT 418 - Multimedia Authoring, Scripting and Production course** at ASU Polytechnic campus beginning August 2015 and ending December 2015. The course covers multiple web/screen design and interactivity topics with project assignments to support skills learned using industry-standard authoring applications: client considerations and project documentation; user interface design, interactivity, media, and databases.

Specific skills highlighted in Daniel's coursework was his transition from JavaScript to jQuery development. Other skills included HTML5/CSS3 to build screen design made based off of a composition made with a tool such as Adobe Photoshop.

Daniel built a microsite as part of his course requirements highlighting the ASU GIT program with appropriate branding and passed the course with the grade of A. He would be a great asset to any potential job opportunities and/or internships willing to invest in his skill-set.
